

Reviewing Sprint 2

Make 2 lists and submit a **(Confluence or Word) Retrospective report, capture a snapshot for reference:**

1. things you want to keep doing
2. things that you want to avoid doing in the future

List 1: Things We Want to Keep Doing

- Regular Pair Programming Sessions: We found that pair programming significantly improved code quality and reduced the number of bugs in our deliverables. We want to continue scheduling regular pair programming sessions for important tasks and user stories.
- Regular Stand-Up Meetings: Our biweekly stand-up meetings helped us stay aligned, identify any blockers early, and prioritize tasks effectively. We will continue holding these meetings to maintain communication and transparency within the team.
- Testing Implementation: Integrating testing into our development process proved to be highly beneficial. It helped us identify and address issues quickly, ensuring the stability and reliability of our system. We will continue to prioritize testing in future sprints.

List 2: Things We Want to Avoid in the Future

- Overlooking Documentation: There were instances where we neglected to update project documentation, leading to confusion and inefficiencies. Moving forward, we aim to prioritize documentation and ensure that it remains up-to-date throughout the sprint.
- Procrastinating on Refactoring: We noticed that we sometimes postponed refactoring tasks, leading to lack of communication and regular updates. To prevent this in the future, we will address refactoring tasks promptly and allocate dedicated time for code improvements.
